Groundwork
SECURITY & COMPLIANCE

SERVICES OVERVIEW

Lay the groundwork. Get certified. Keep shipping.

A fractional CISO and security-engineering practice for small and midsize companies that need enterprise-grade proof to win customers — without pausing the product or hiring a full-time security team.

SOC 2 · HITRUST · ISO 27001 · HIPAA · FedRAMP readiness · AWS · Google Cloud · Azure

WHAT WE DO

Two ways in. One program.

Advisory when you need a CISO seat. Engineering when the cloud and tooling have to actually exist. Most clients use both.

LINE A Fractional CISO & GRC

01 Fractional CISO

A security leader on a monthly cadence: strategy, customer questionnaires, vendor risk, IR tabletops, and a KRI dashboard.

02 Certification readiness

SOC 2, HITRUST, ISO 27001, HIPAA, and FedRAMP readiness: scoping, policies, control implementation, evidence automation, and auditor selection.

03 GRC platform management

Your GRC platform, managed: controls, evidence, risks, and vendor reviews kept current between audits. Plus internal audit co-sourcing.

LINE B Security engineering & automation

04 Cloud configuration

We configure AWS, Google Cloud, Azure, or another provider to an audit-shaped baseline: identity, logging, encryption, backups, detection, and alerting.

05 Security automation

Automations that keep controls running: evidence collection, IAM-change alarms, ticketed vulnerability remediation, and CI hooks.

06 AI automations & integrations

Built on Claude, OpenAI, and Cursor: agentic workflows for your team, auditor copilots, control mapping, and questionnaire responses.

WAYS TO START

Readiness sprint
Fixed-scope path to audit-ready for SOC 2, HITRUST, or ISO 27001.

Cloud baseline
CIS-benchmarked groundwork, detection, alerting, and an IR tabletop.

vCISO seat
A security leader for customer questionnaires, vendors, and the board.

FedRAMP readiness
Boundary definition, control inheritance, SSP scaffolding, and 3PAO prep.
