Groundwork
SECURITY & COMPLIANCE

SERVICES OVERVIEW

Lay the groundwork. Get certified. Keep shipping.

A fractional CISO and security-engineering practice for small and midsize companies that need enterprise-grade processes to win customers — without pausing the product or hiring a full-time security team.

SOC 2 | HITRUST | ISO 27001 | HIPAA | AWS | Google Cloud | Azure | Security Operations

WHAT WE DO

GRC Program manager for Audit Readiness with a Security Operations team to implement the controls on your behalf.

LINE A Fractional CISO & GRC

01 Fractional CISO

A security leader on a monthly cadence: strategy, customer questionnaires, vendor risk, security vendor selection, IR tabletops, and a KRI dashboard.

02 Certification readiness

SOC 2, HITRUST, ISO 27001, HIPAA, and FedRAMP readiness: scoping, policies, control implementation, evidence automation, and auditor selection.

03 GRC platform management

Your GRC platform (Secureframe, Vanta, etc.), managed: controls, evidence, risks, and vendor reviews kept current between audits. Plus internal audit co-sourcing.

LINE B Security engineering & automation

04 Cloud configuration

We configure AWS, Google Cloud, Azure, or another provider to an audit-shaped baseline: identity, logging, encryption, backups, detection, and alerting.

05 Security operations

The day-to-day work that keeps controls running: pen test coordination, ticketed vulnerability remediation, IAM-change alarms, evidence automation, and CI hooks.

06 AI automations & integrations

Built on Claude, OpenAI, and Cursor: agentic workflows for your team, auditor copilots, control mapping, and questionnaire responses.
